Plan

The Waterways dog waste bin is used along the waterfront and within Docklands parks. It is located in areas of high pedestrian and 'dog walking' traffic at regular intervals and positioned alongside litter and recycling bins.

The Waterways dog waste bin incorporates a stainless steel dispenser for biodegradable dog waste bags. The bags are accessible through a slot in the bin wall.

The bin frame is fabricated from perforated grade 316 stainless steel and is serviced by an 80 litre wheeled plastic bin. The lid is fabricated from pressed grade 316 stainless steel and polished to a bright satin finish.

For fabrication & installation drawings, refer to City of Melbourne, City Design drawings; Project No: 901411- Dog Waste Bin
